

HP Converged Infrastructure

For the Data Center of the Future

Ulf Syvertsen, Industry Director, Communications, Media and Entertainment
NonStop Division, Europe, Middle East and Africa
Hewlett Packard Company
May 26th 2010

IT Sprawl is Taking Business Performance to The Breaking Point

70% captive in operations and maintenance

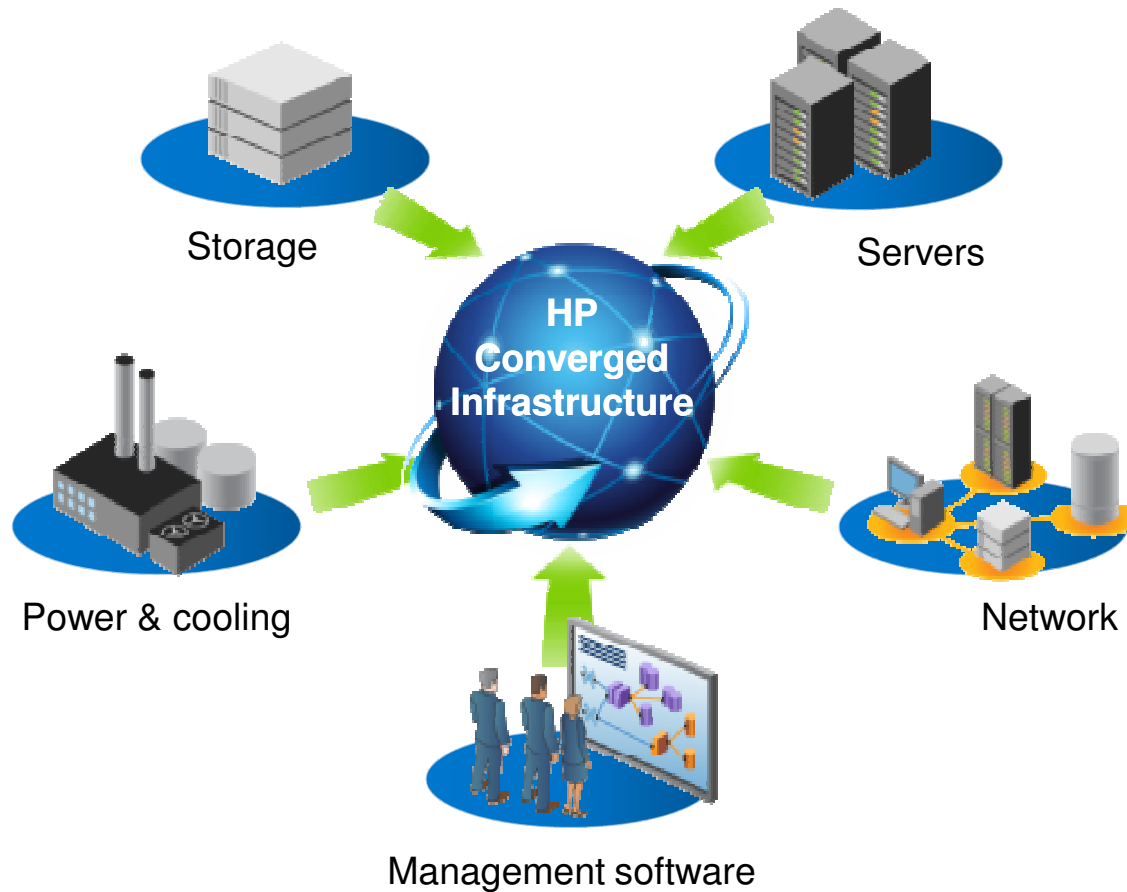

- Rigid & aging infrastructure
- Application & information complexity
- Inflexible business processes

Business innovation throttled to 30%

- Time to revenue
- Cost of lost time, effort, opportunity
- Unpredictable business cycles

The Data Center of the future will be built on a Converged Infrastructure

HP Converged Infrastructure

A blueprint for the data center

Eliminates silos and integrates technologies into pools of interoperable resources.

The result:

Delivers a new level of simplicity, integration, and automation to accelerate outcomes that matter:

- Faster Time to Revenue
- Lower Costs of acquisition and implementation
- Flexibly respond to business changes
- Lower Risks

Built on industry standards and choice

NonStop in the DataCenter of the Future

Shares Modular Building Blocks

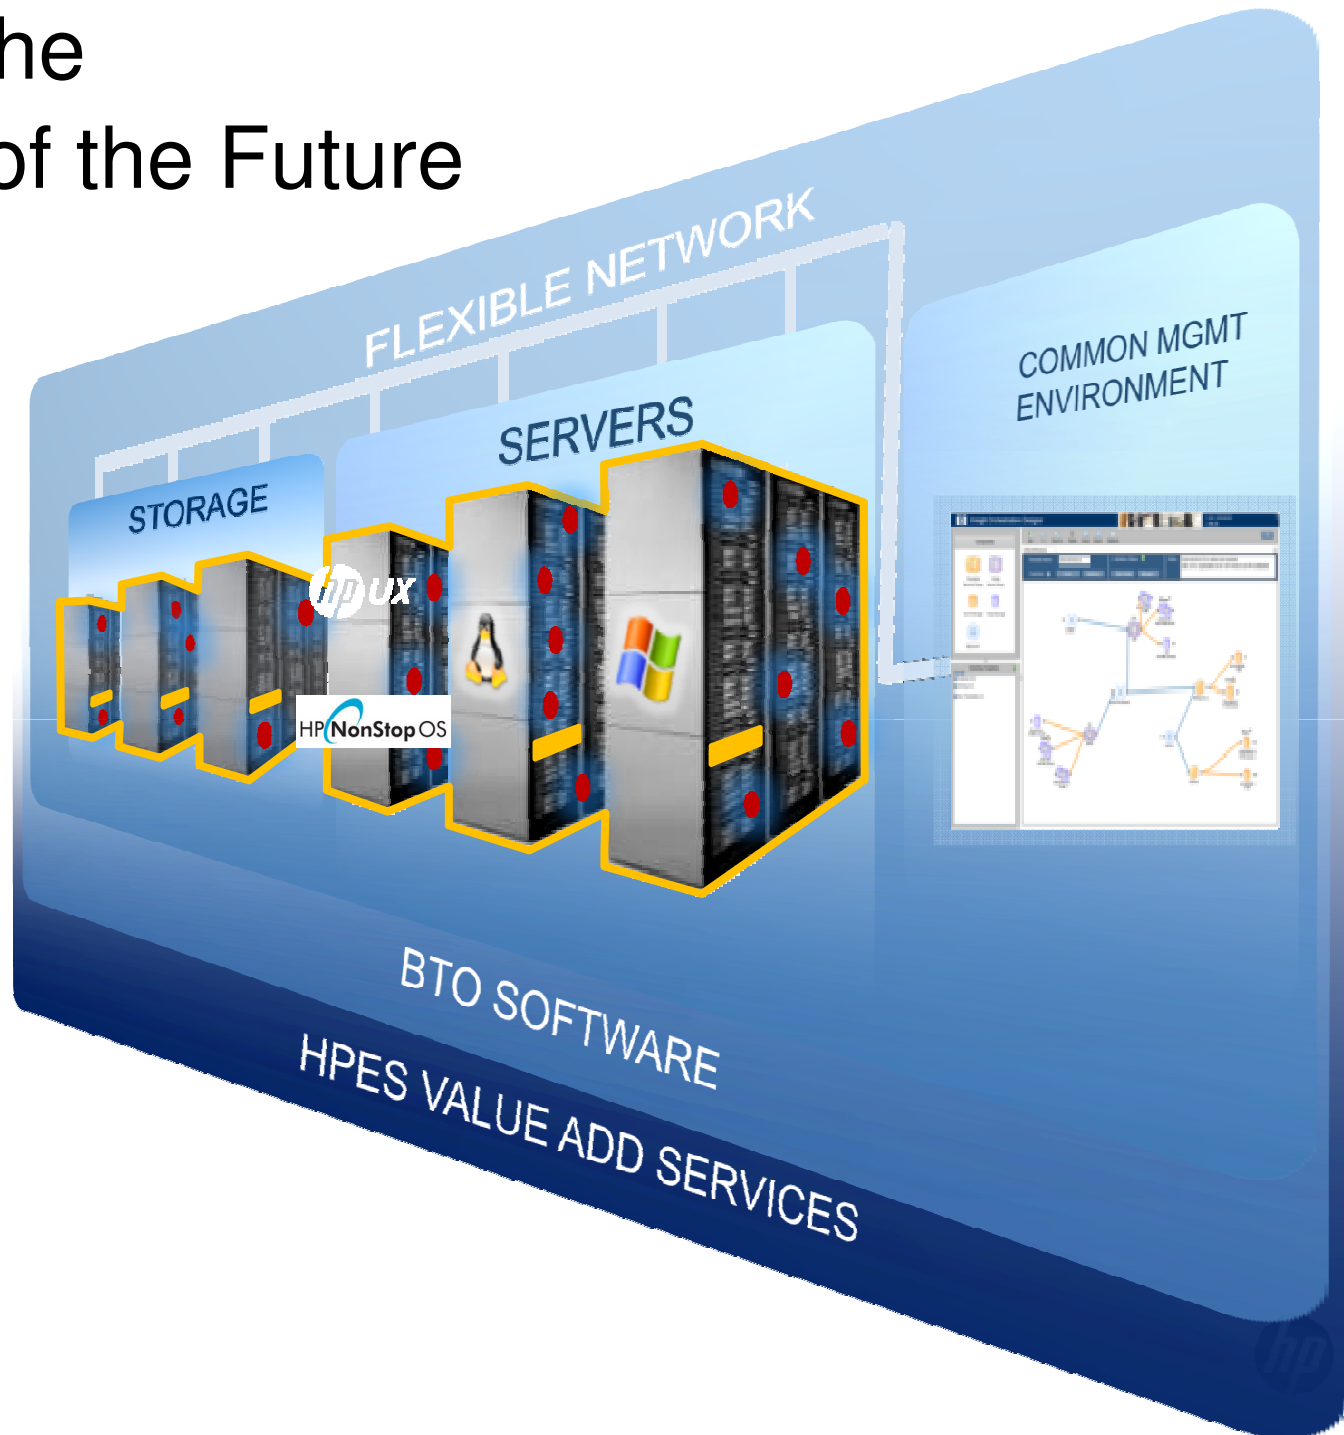

Common Management

Scalable/Reliable to any service level

Open Application Development

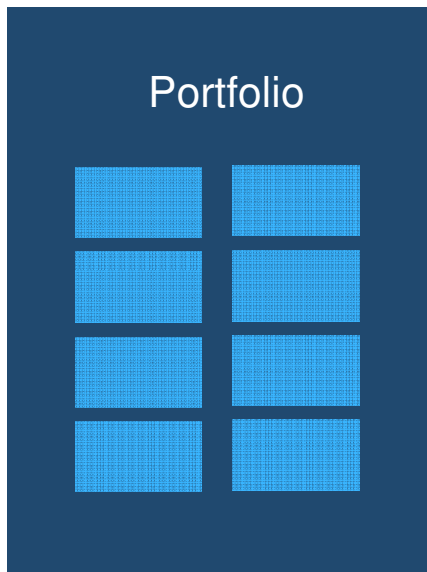

Rapid Programmer Productivity

Services to enhance ROI

Only HP can bring it all together

Intellectual property

Open integration

Expertise to deliver the way you want

In-house

Outsourced

via Cloud

Desktop to NonStop, core switch to network edge

Accelerate your Business

– Make 70/30 about innovation again

Improved productivity

Utilization infrastructure capacity

Reclaimed facility energy capacity

Faster time to business value

Improve service-levels

Support business innovation

Summary

– HP is leading the technology transformation

Only HP has the complete Converged Infrastructure portfolio

Open architecture, customer choice

More value for customers, now and in the future

Getting Started with HP Convergence

Assess where you stand

- Converged Infrastructure Maturity Assessment
- Visioning workshop
- Proof of Concept services

See it in action

Converged Infrastructure solution demos:

- Live at HP Solution Centers
- Virtually on-demand at your location

Plan for convergence

Data Center /Application:

- Transformation
- Modernization
- Design & Implementation

NonStop in CME

VNUG Update

The Telco Market

- Pressure to lower Capex and Opex
- Requirement for infrastructure to be reliable, resilient
- Move away from custom made hardware to off the shelf components
- Future proof solution – meet tomorrows requirements such as converged billing, 4G, etc..
- Drive new revenue streams by developing new services quicker!
- Looking to consolidate applications

NonStop Development Modernization

You want:

- High developer productivity
- Leverage ubiquitous skills
- Common development environment for all platforms
- Workstation based development

NonStop Strength

- Our new development infrastructure is based on the industry leading Eclipse IDE
- Eclipse is open source
- Many industry extensions (plugins) available to support any phase of the development lifecycle
- NED offers commercial plugins– same look and feel
- Support for Java out of the box
- Eases development with Open Source Frameworks

Straightforward porting to NonStop

Some examples

Payment Systems

Workload Scenarios

- Workloads need to scale
 - HP Integrity NonStop offers near linear scalability
- Workloads require continuous availability
 - HP Integrity NonStop leads the industry in out-of-the-box continuous system and continuous application service
- Workloads need to be sensitive to Total Cost of Ownership (TCO)
 - Complexity and associated costs of configuring and managing clustered databases are very high
 - HP Integrity NonStop leads the industry with its lowest TCO for payment workloads

Porting proof points

About AJB

- 143 customers
- 85,000+ locations
- Focused on payment solutions
- Target market
 - Tier 1 and 2 merchants with greater than 50 locations
- 23 of the top 100 merchants in North America rely on AJB for their payment solutions
- 11 of the 50 fastest growing international retailers use AJB payment software

Business Usage Examples

– Full support for gift card programs

- In-house gift card application
- Gift card mall support
- Gift card acceptance at the pump

– Loyalty

- Loyalty rewards tracking – tied to pump discounts and or instant wins
- Ability to route loyalty transactions based on branding of gas station
- Working with lottery corporations on integrating lottery tickets into POS

About Lusion

An **innovative** provider of 24/7 payment transaction processing solutions, committed to **modern technologies** that **reduce cost and time to market** yet retain reliability, scalability and performance. Lusion core transaction engine is called **Tango**.

Founded in **1999**, with HQ in **Paris**, Lusion is a **privately-held** company with strong **payments leadership** and expertise. FY09 turnover was **€13m**, with **110 employees**, and customers in Finance, Retail, Utilities and Transport across **EMEA and USA**.

Lusion promotes **flexible licensing and support** of **Tango** including supply of **source code**. Add-on modules include **Data Replication** (Active-Active), **Risk Management**, and **Loyalty**. There is **no capacity licence** element in **Tango** pricing.

The Porting of Tango to HP NonStop: Key Principles

Principles of the Partnership:

- Based on OSS (POSIX) HP OS, using SQL/MX
- HP provided LUSIS with full HP NonStop training and technical education
- HP provided complete hardware/software platform for migration

A Professional and Successful Porting Project:

- Step 1: Technical Validation
 - Regeneration of low level technical Tango objects
 - SQL/MX Tango module development for database support
- Step 2: Full TANGO EFT Suite
 - Extensive functional validation
 - Performance validation : comparison with existing systems
- Full benchmark report for management, and decision to go to market
- Performance adequately meets Tier 1 F.I. requirements

An exceptionally quick project –
2.5 months from start to successful completion!

The Porting of Tango to HP NonStop: Benchmark Configuration

Extensive **testing phase** was completed in **May 2009**:

CPU in Germany. Testing loader in Paris.

The system used for testing is : H-Series HP Non-Stop
(NONSTOP_KERNEL ns2ka J06 06 NSE-W)

Tests consisted mainly of:

- running **Tango processes on CPU #3 and CPU #2**
- **database processes** running on CPU#1 to check the **concurrency** of access to database and the **context free architecture**:
- **Various numbers of ATM. Various architectures. Standard code.**

Objective was to check the availability for **50 tps per CPU**.

Objective was reached with an average **Response Time < 200 ms**.

New testing campaign currently under way with **new HPNS ODBC interface**.

About Opus and ElectraSWITCH

- 100+ installations
- 67% of India's card based Internet transactions
- EMV acquiring and issuing for Mitsubishi Group bank, Indonesia
- 50% of ATMs in East Africa
- Joint development with HP to port to NonStop platform

Architecting the world's largest payment system

State Bank of India (SBI) upgrades its ATM/POS network

– Solution Overview

- State Bank of India (SBI) to replace their existing ATM platform with electraSWITCH software from Opus
- Solution based on Integrity NonStop BladeSystem
- Refreshed environment will power 25,000 ATMs, 500,000 PoS devices and kiosks and authorize 80 million debit cards by next year

– Project Highlights

- Migration of ATMs has already commenced and would be complete in six to eight months, making this the fastest migration of an EFT Switch of this scale across the world.
- Number of ATMs, PoS devices and debit card authorizations expected to double by 2014, making this the largest installation in the world

Porting proof points

Modern HP Integrity NonStop software speeds innovative solutions to new markets

There's an old saying that dates back to at least the 17th century: "The proof of the pudding is in the eating." A shortened version—"The proof is in the pudding"—is more commonly heard today. But the meaning is the same, and it's basically this: You can say all you want, but if you really want to make a point, you had better have solid evidence to back it up. Proof points speak volumes.

Fast-forward to the 21st century and the HP Integrity NonStop family of ultra-available and scalable systems. HP has made huge strides in turning this platform into an open and modern environment. Its industry-standard hardware components, including the Intel Itanium microprocessor, leverage volume economics to deliver much lower total cost of ownership than previous generations of NonStop systems.

As an integral part of HP's forward-looking Converged Infrastructure strategy, the Integrity NonStop platform can be managed with the same tools used to manage any other HP gear, including HP System Insight Manager. Applications can be developed using the latest development environments, including Eclipse. Java and the open-source SASH stack—for example the market-leading frameworks Spring, Hibernate, Apache Axis2, and Apache MyFaces—are supported on the Integrity NonStop platform.

Outcomes that matter.
